

XB1085 Series

ETR0324-009

3.0A Positive Voltage Regulator

■ GENERAL DESCRIPTION

The XB1085 is a series of low dropout positive voltage regulators with a high output current capacity of 3.0A .

Stable output can be maintained by using 10 μ F (C_{IN}) and 22 μ F (C_L) of tantalum capacitors.

The fixed voltage types (XB1085P series) are available in 1.5V, 1.8V, 2.5V, 3.3V, and 5.0V. The voltage adjustable type (XB1085K series) is also available which can set the output voltage with only two external resistors.

With an overcurrent and thermal protection circuit built-in, the IC is disabled for protection when an output current reaches limit current or junction temperature increases up to limit temperature.

The XB1085 series is available in TO-252 package.

■ OUTPUT VOLTAGE ADJUSTMENT

With the adjustable XB1085K12BJR, a 1.25V reference voltage is fixed between the V_{OUT} pin and the ADJ pin and the external resistors R1 and R2 are used to set the output voltage.

Please set it so that an electric current (I_{R1}) flowing through R1 is as above 10mA.

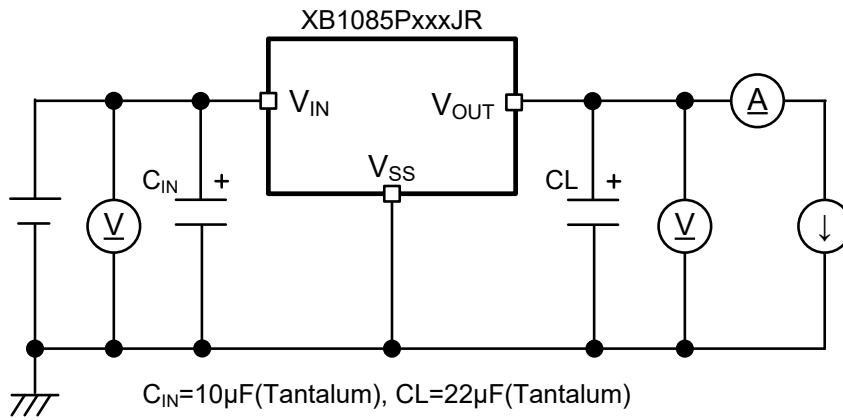

The output voltage is given by the following equation.

$$V_{OUT} = V_{REF} \times \left(1 + \frac{R2}{R1}\right) + I_{ADJ} \times R2$$

$$R2 = \frac{R1 \times (V_{OUT} - V_{REF})}{V_{REF} + I_{ADJ} \times R1}$$

■ NOTES ON USE

1. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to the noise and/or phase lag depending on output current. Please strengthen V_{IN} and V_{SS} wiring in particular.
3. The input capacitor (C_{IN}) and the output capacitor (C_L) should be placed to the IC as close as possible with a shorter wiring.
4. Torex places an importance on improving our products and its reliability. However, by any possibility, we would request user fail-safe design and post-aging treatment on system or equipment.
