

## Watchdog Timeout Period Externally Adjustable Voltage Detector

## ■ GENERAL DESCRIPTION

The XC6130/XC6131 series are voltage detectors with a watchdog function. The watchdog timeout time and release delay time can be set as desired using a single external capacitor. These voltage detectors are used for microprocessor monitoring, and when the power voltage reaches the detect voltage or an L→H pulse is not input to the watchdog pin within the watchdog timeout time, an L level signal is output from the RESETB pin.

The XC6130 series has a manual reset function. When the manual reset pin is set to Low level at any desired timing, an L level signal is output from the RESETB pin.

The XC6131 series has a watchdog ON/OFF function. By setting the EN pin to L level, the watchdog function can be turned OFF while the voltage detector that monitors the power voltage continues to operate.

The MRB pin and EN pin are pulled up internally to  $V_{IN}$ , and thus these pins can be left open when not used.

## ■ APPLICATIONS

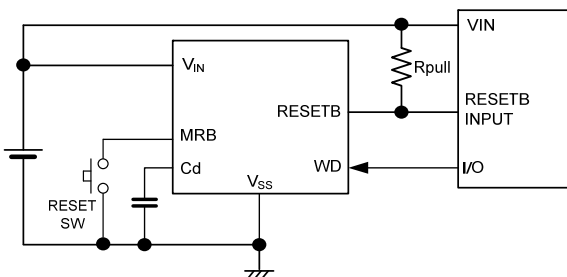

- Microprocessor reset and malfunction monitoring circuitry
- Memory battery backup circuits
- Power-on reset circuits
- Power failure detection

## ■ FEATURES

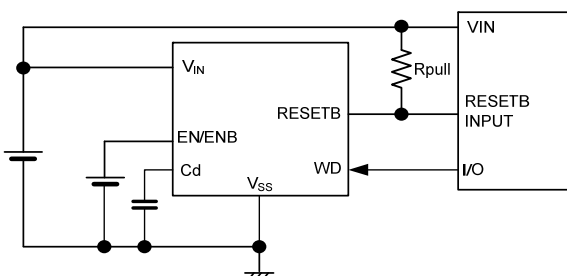

<b>Operating Ambient Temperature</b>	: $-40^{\circ}\text{C} \sim +125^{\circ}\text{C}$
<b>Operating Voltage Range</b>	: $1.5\text{V} \sim 6.0\text{V}$
<b>Detect Voltage Range</b>	: $1.6\text{V} \sim 5.0\text{V} \pm 1.0\%$ (SOT-26) $1.6\text{V} \sim 5.0\text{V} \pm 1.5\%$ (DFN1515-6A)
<b>Hysteresis Width</b>	: $V_{DFL} \times 5\%$
<b>Temperature Characteristics</b>	: $\pm 50\text{ppm}/^{\circ}\text{C}$
<b>Output Configuration</b>	: N-channel open drain output
<b>Low Power Consumption</b>	: $8.1\mu\text{A}$ Detect $9.8\mu\text{A}$ Release $2.5\mu\text{A}$ Release (EN=L)
<b>Function</b>	: Manual Reset (XC6130) : Watchdog function OFF (XC6131)
<b>WD Timeout Time</b>	: $100\text{ms}$ ( $C_d=0.1\mu\text{F}$ )
<b>Release Delay Time</b>	: $100\text{ms}$ ( $C_d=0.1\mu\text{F}$ ) (at power on) $10\text{ms}$ ( $C_d=0.1\mu\text{F}$ ) (After Watchdog Timeout)
<b>Package</b>	: SOT-26 DFN1515-6A
<b>Environmentally Friendly</b>	: EU RoHS compliant, Pb free

## ■ TYPICAL APPLICATION CIRCUIT

XC6130 Series

XC6131 Series

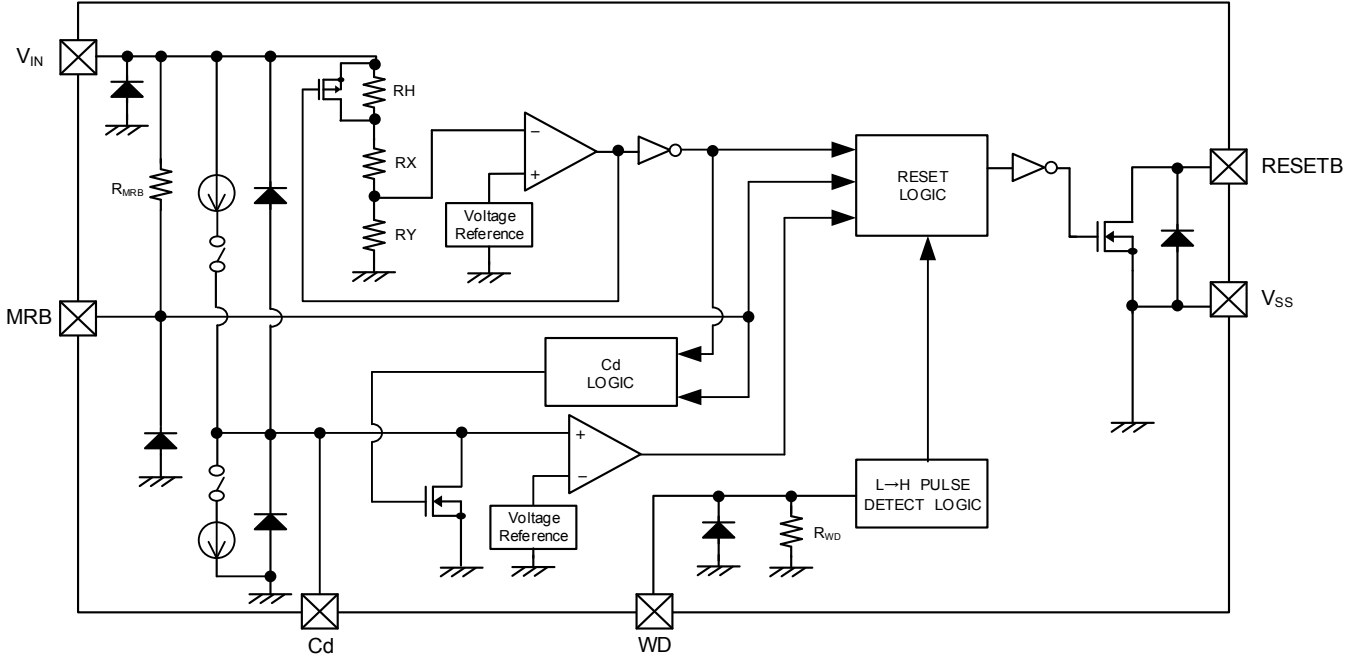

## ■ TYPICAL PERFORMANCE CHARACTERISTICS

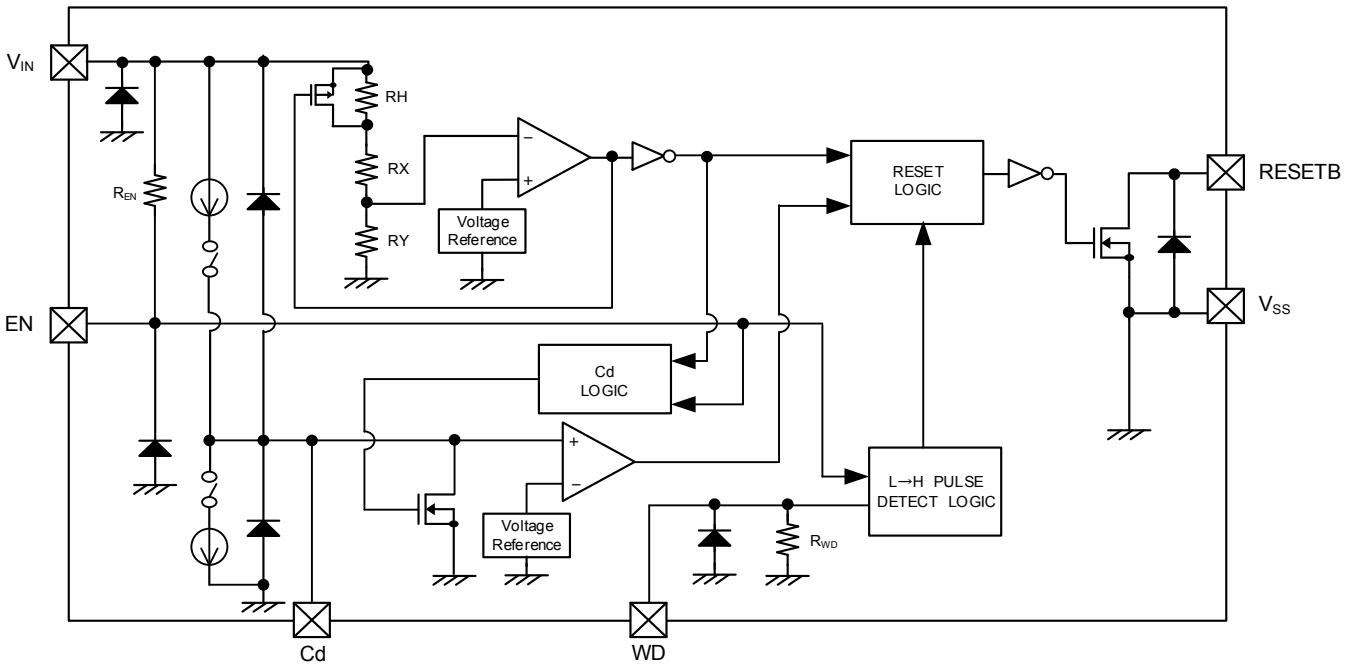

## ■ BLOCK DIAGRAM

● XC6130 Series Type A

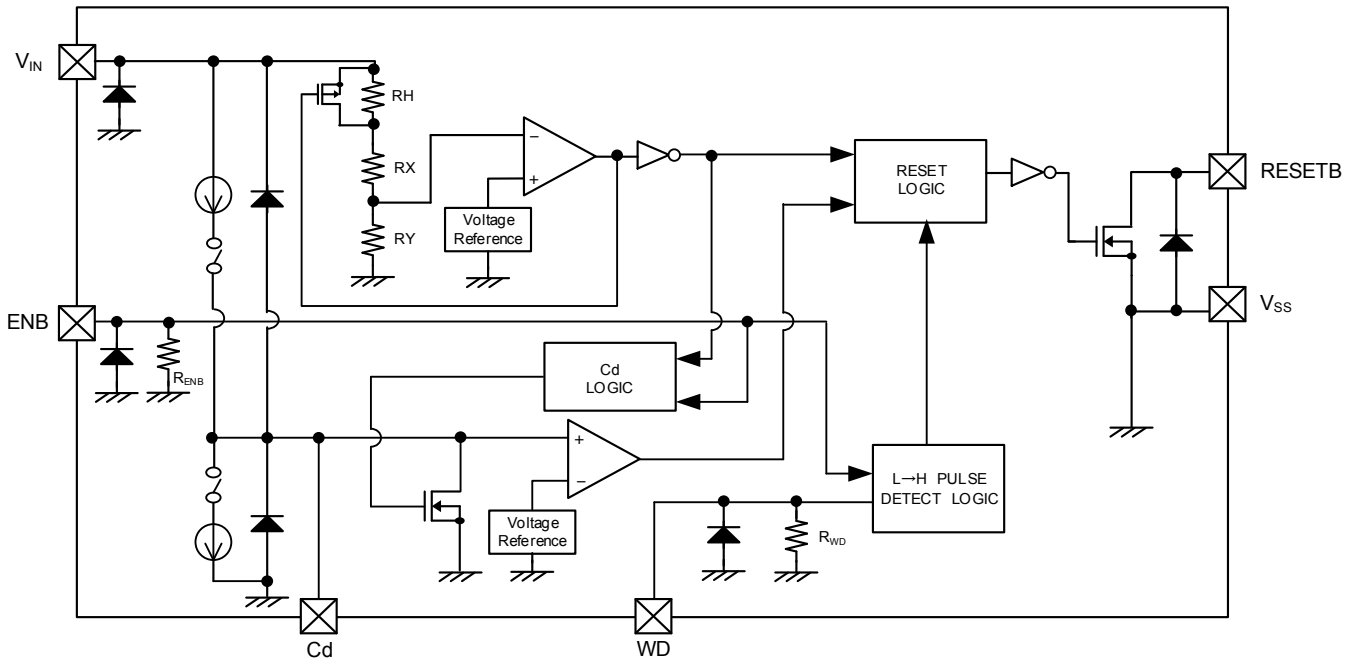

● XC6131 Series Type A

\* Diodes inside the circuit are an ESD protection diode and a parasitic diode.

■ **BLOCK DIAGRAM**

● XC6131 Series Type B

\* Diodes inside the circuit are an ESD protection diode and a parasitic diode.

## ■ PRODUCT CLASSIFICATION

### ● Ordering Information

XC6130①②③④⑤⑥-⑦

SOT-26

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	TYPE	A	MRB pin With pull-up resistor
②③	Detect Voltage	16~50	e.g. 1.6V → ②=1, ③=6
④	Detect Accuracy	1	±1.0%
⑤⑥-⑦ (*1)	Package (Order Unit)	MR-G	SOT-26 (3000pcs/Reel) <sup>(*)2</sup>

(\*1) The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

(\*2) The SOT-26 reels are shipped in a moisture-proof packing.

DFN1515-6A

DESIGNATOR	ITEM	SYMBOL	DESCRIPTION
①	TYPE	A	MRB pin With pull-up resistor
②③	Detect Voltage	16~50	e.g. 1.6V → ②=1, ③=6
④	Detect Accuracy	A	±1.5%
⑤⑥-⑦ (*1)	Package (Order Unit)	6R-G	DFN1515-6A (5000pcs/Reel) <sup>(*)2</sup>

(\*1) The "-G" suffix denotes Halogen and Antimony free as well as being fully EU RoHS compliant.

(\*2) The DFN1515-6A reels are shipped in a moisture-proof packing.

XC6131①②③④⑤⑥-⑦

XC6131 series

\*The dissipation pad for the DFN1515-6A packages should be solder-plated in reference mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the  $V_{SS}$  (No. 2) pin.

## ■ PIN ASSIGNMENT

XC6130 Series

PIN NUMBER		PIN NAME	FUNCTIONS
SOT-26	DFN1515-6A		
1	1	WD	Watchdog Input
2	5	MRB	Manual Reset Input
3	6	$V_{IN}$	Power Input
4	4	RESETB	Reset Output
5	2	$V_{SS}$	Ground
6	3	Cd	Adjustable Pin for Release Delay Time/Watchdog Timeout

XC6131 Series

PIN NUMBER		PIN NAME	FUNCTIONS
SOT-26	DFN1515-6A		
1	1	WD	Watchdog Input
2	5	EN	Watchdog ON/OFF Control (XC6131A)
		ENB	Watchdog ON/OFF Control (XC6131B)
3	6	$V_{IN}$	Power Input
4	4	RESETB	Reset Output
5	2	$V_{SS}$	Ground
6	3	Cd	Adjustable Pin for Release Delay Time/Watchdog Timeout

## FUNCTION CHART

### 1) XC6130 Series

$V_{IN}^{*2}$	$V_{MRB}^{*3}$	$V_{WD}^{*6}$	$V_{RESETB}^{*7}$
H	H	H	L↔H
		L	
		OPEN	
		L↔H	H
H	L	*1	L
L	L		
H	L		

### 2) XC6131A Series

$V_{IN}^{*2}$	$V_{EN}^{*4}$	$V_{WD}^{*6}$	$V_{RESETB}^{*7}$
H	H	H	L↔H
		L	
		OPEN	
		L↔H	H
H	L	*1	H
L	L		
H	L		

### 3) XC6131B Series

$V_{IN}^{*2}$	$V_{ENB}^{*5}$	$V_{WD}^{*6}$	$V_{RESETB}^{*7}$
H	L	H	L↔H
		L	
		OPEN	
		L↔H	H
H	H	*1	H
L	L		
H	L		

\*1: Includes all WD logic ( $V_{WD}=H, L, OPEN, H \rightarrow L, L \rightarrow H$ )

\*2:  $V_{IN}=H$  indicates higher than the release voltage.

$V_{IN}=L$  indicates lower than the detect voltage.

\*3:  $V_{MRB}=H$  indicates MRB High Level Voltage.

$V_{MRB}=L$  indicates MRB Low Level Voltage.

Since MRB pin of XC6130 Series is pulled up internally, the open condition of MRB pin is acceptable when MR function is not required.

\*4:  $V_{EN}=H$  indicates EN High Level Voltage.

$V_{EN}=L$  indicates EN Low Level Voltage.

The EN pin of the XC6131A Series is pulled up internally, enabling the WD function to be used with EN open.

\*5:  $V_{ENB}=H$  indicates ENB High Level Voltage.

$V_{ENB}=L$  indicates ENB Low Level Voltage.

The ENB pin of the XC6131B Series is pulled down internally, enabling the WD function to be used with ENB open.

\*6:  $V_{WD}=H$  indicates WD High Level Voltage.

$V_{WD}=L$  indicates WD Low Level Voltage.

\*7:  $V_{RESETB}=H$  indicates the release state.

$V_{RESETB}=L$  indicates the detect state.

## ■ ABSOLUTE MAXIMUM RATINGS

XC6130 Series

Ta=25°C

PARAMETER		SYMBOL	RATINGS	UNITS
Input Voltage		V <sub>IN</sub>	-0.3~+7.0	V
WD Input Voltage		V <sub>WD</sub>	-0.3~+7.0	V
MRB Input Voltage		V <sub>MRB</sub>	-0.3~+7.0	V
Cd Pin Voltage		V <sub>Cd</sub>	-0.3~+V <sub>IN</sub> +0.3 or +7.0 <sup>(*)</sup>	V
Output Voltage		V <sub>RESETB</sub>	-0.3~+7.0	V
Cd Pin Current		I <sub>Cd</sub>	10	mA
Output Current		I <sub>OUT</sub>	30	mA
Power Dissipation	SOT-26	Pd	250	mW
			600(PCB mounted) <sup>(*)</sup>	
	DFN1515-6A		800(PCB mounted) <sup>(*)</sup>	
Operating Ambient Temperature		Topr	-40~+125	°C
Storage Temperature		Tstg	-55~+125	°C

All voltages are described based on the V<sub>SS</sub> pin.

<sup>(\*)</sup> The maximum value should be V<sub>IN</sub>+0.3 or +7.0 in the lowest.

<sup>(\*)</sup> It is reference data on the power dissipation when mounting the board. For mounting conditions, see page 28 and 29.

## OPERATIONAL EXPLANATION

In the XC6130/XC6131 Series, the voltage divided by RH, RX, and RY connected to the V<sub>IN</sub> pin is compared to the internal reference voltage by the comparator, and the resulting output signal drives the watchdog logic and output driver. The V<sub>IN</sub> pin voltage is gradually lowered, and when the V<sub>IN</sub> pin voltage reaches the detect voltage, H→L level signal is output to the reset output pin (V<sub>DFL</sub> type).

XC6130 Series

### <Output signal of reset output pin>

If the V<sub>IN</sub> pin voltage is below the detect voltage, the reset output pin outputs H→L level signal.

After the V<sub>IN</sub> pin voltage reaches the release voltage, the reset output pin holds L level during release delay time 1 (t<sub>DR1</sub>). If a start signal is not input to the WD pin within the watchdog timeout time, the reset output pin holds L level during release delay time 2 (t<sub>DR2</sub>) and then outputs H level signal.

### <Hysteresis>

If the internal comparator outputs L level signal, the PMOS transistor connected in parallel to RH turns ON and the hysteresis circuit activates. The hysteresis voltage width is obtained from the difference between the detect voltage and the release voltage.

The hysteresis width is (V<sub>DFL</sub> × 0.05) V (TYP.).

### <WD pin>

A watchdog timer is used to detect abnormal operation and runaway in a microprocessor. If “L→H” signal is not input from the microprocessor within the watchdog timeout time, the reset output pin holds the detect state during release delay time 2 (t<sub>DR2</sub>), and then L → H level signal is output to the reset output pin.

In addition, the watchdog pin is pulled down internally to V<sub>SS</sub>, and when the watchdog pin is OPEN, a reset signal is output after the watchdog timeout time.

The watchdog timeout time (t<sub>WD</sub>) can be set using the equation below.

$$t_{WD} = Cd \times 10^6$$

Example: When Cd is 0.1 μF, t<sub>WD</sub> = 0.1 × 10<sup>-6</sup> × 10<sup>6</sup> = 100ms (TYP.)

## OPERATIONAL EXPLANATION (Continued)

### <Release delay time 1>

When power is added on the  $V_{IN}$ , the time from the point that  $V_{IN}$  reaches the release voltage until the reset output pin reaches the release voltage is release delay time 1 ( $t_{DR1}$ ).

Release delay time 1 ( $t_{DR1}$ ) can be set using the equation below.

$$t_{DR1} = Cd \times 10^6$$

Example: When Cd is 0.1 $\mu$ F,  $t_{DR1} = 0.1 \times 10^{-6} \times 10^6 = 100\text{ms}$  (TYP.)

### <Release delay time 2>

Release delay time 2 ( $t_{DR2}$ ) is the duration of the detect state until the watchdog timer restarts when "L  $\rightarrow$  H" signal is not input to the WD pin within the watchdog timeout time.

Release delay time 2 ( $t_{DR2}$ ) can be set using the equation below.

$$t_{DR2} = Cd \times 10^5$$

Example: When Cd is 0.1 $\mu$ F,  $t_{DR2} = 0.1 \times 10^{-6} \times 10^5 = 10\text{ms}$  (TYP.)

### <Detect delay time>

The detect delay time ( $t_{DF}$ ) is the time until the  $V_{IN}$  pin voltage drops to the detect voltage and the reset output pin enters the detect state.

### <MRB pin> \*XC6130 Series

The MRB pin voltage can be input to force the signal of the reset output pin to the detect state.

When the MRB pin voltage input reaches an H $\rightarrow$ L level signal, an H $\rightarrow$ L level signal is output to the reset output pin. After the MRB pin voltage reaches L $\rightarrow$ H level, the reset output pin holds the detect state during release delay time 1 ( $t_{DR1}$ ).

### <EN pin> \*XC6131A Series

If the watchdog function will not be used, the EN pin can be set to L level to forcibly stop only the watchdog function and keep the voltage detector operating. When using the watchdog function, use the EN pin at H level. When the input voltage reaches the L $\rightarrow$ H level, the reset output pin holds the detect state during release delay time 1 ( $t_{DR1}$ ), regardless of the EN pin voltage. (Refer to Timing Chart 2, ①)

If the input voltage is higher than the release voltage and the EN pin voltage reaches L $\rightarrow$ H level, the watchdog function recovers. (Refer to Timing Chart 2, ②)

### <ENB Pin> \*XC6131B Series

When the watchdog function is not used, the ENB pin can be set to H level to keep the voltage detector operating and forcibly stop only the watchdog function. To use the watchdog function, use the ENB pin at L level. When the input voltage reaches the L $\rightarrow$ H level, the reset output pin holds the detect state during release delay time 1 ( $t_{DR1}$ ), regardless of the ENB pin voltage. (Refer to Timing Chart 3, ①)

When the input voltage is higher than the release voltage and the ENB pin voltage reaches H $\rightarrow$ L level, the watchdog function recovers. (Refer to Timing Chart 3, ②)

## NOTES ON USE

1. Use this IC within the absolute maximum ratings. Risk of deterioration or damage if the absolute maximum ratings are exceeded during temporary or transient voltage drops or voltage jumps.
2. If a resistance is added between the power and the VIN pin, the flowthrough current when the IC operates will cause the VIN pin voltage to drop and the IC may malfunction.
3. When raising the input voltage from the minimum operating voltage or less, if changed suddenly, the release delay time may become short.
4. Sufficiently reinforce the VIN and GND lines, as power noise may cause malfunctioning of the watchdog function and voltage detector. It is recommended that a capacitor be added between VIN and GND.
5. Enter "H" level, or "L" level should be fed to MRB and EN/ENB pin.
6. To ensure stable operation of the watchdog function, be sure to add a capacitor at the Cd pin.  
The release delay time and watchdog timeout time are affected by the accuracy and temperature characteristics of the Cd pin capacitor.
7. If the Cd pin capacitor is unable to discharge to the ground level during recovery after a power interruption, the release delay may become noticeably shorter. Exercise caution.
8. The pull-up resistance connected to the output pin determines the RESETB voltage at the time of detect and release. Refer to the following to select the resistance value.

$$\text{At detection: } V_{\text{RESETB}} = (V_{\text{pull-Up}}) / (1 + R_{\text{pull}} / R_{\text{ON}})$$

Vpull-Up: Voltage after pull-up

R<sub>ON</sub><sup>(1)</sup>: ON resistance of N-ch driver (calculated from  $V_{\text{RESETB}} / I_{\text{RBOUT1}}$  in electrical characteristics)<sup>(3)</sup>

Example calculation:

When  $V_{\text{IN}} = 2.0\text{V}$ <sup>(2)</sup>,  $R_{\text{ON}} = 0.3 / 4.9 \times 10^{-3} \approx 61.2\Omega$  (MAX. ). If you wish to make the VRESETB voltage at detection 0.1V or lower with  $V_{\text{pull-Up}} = 3.0\text{V}$ ,

$$R_{\text{pull}} = (V_{\text{pull-Up}} / V_{\text{RESETB}} - 1) \times R_{\text{ON}} = (3 / 0.1 - 1) \times 61.2 \approx 1.8\text{k}\Omega,$$

and thus to make the output voltage at detection 0.1V or less under the above conditions, the pull-up resistance must be 1.8kΩ or higher.

<sup>(1)</sup> The smaller  $V_{\text{IN}}$  is, the larger  $R_{\text{ON}}$  becomes.

<sup>(2)</sup> When selecting  $V_{\text{IN}}$ , calculate using the lowest value of the input voltage range you will use.

<sup>(3)</sup>  $I_{\text{RBOUT1}}$  specified in the electrical characteristics is the value at  $T_a = 25^\circ\text{C}$ .  $I_{\text{RBOUT1}}$  varies depending on the ambient temperature.

To select the pull-up resistance taking ambient temperature into account, please calculate  $I_{\text{RBOUT}}$  with the MIN. value of the ambient temperature range of  $-40^\circ\text{C} \leq T_a \leq 125^\circ\text{C}$ .

$$\text{At release: } V_{\text{RESETB}} = (V_{\text{pull-Up}}) / (1 + R_{\text{pull}} / R_{\text{OFF}})$$

Vpull-Up: Voltage after pull-up

R<sub>OFF</sub>: Resistance value 60MΩ (MIN. )

when N-ch driver is OFF (calculated from  $V_{\text{RESETB}} / I_{\text{LEAK}}$  in electrical characteristics)

Calculation example:

If you wish to make  $V_{\text{RESETB}}$  5.99V or higher with  $V_{\text{pull-Up}} = 6.0\text{V}$

$$R_{\text{pull}} = (V_{\text{pull-Up}} / V_{\text{RESETB}} - 1) \times R_{\text{OFF}} = (6 / 5.99 - 1) \times 60 \times 10^3 \approx 100\text{k}\Omega,$$

and thus to make the output voltage 5.99V or higher at release under the above conditions, the pull-up resistance must be 100kΩ or less.

9. We place importance on improving our products and increasing reliability. However, please design safety into the device and system, including fail-safe design and post-aging treatment.

1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
