XC6201 Series

Positive Voltage Regulators

■ GENERAL DESCRIPTION
The XC6201 series are highly precise, low power consumption, positive voltage regulators manufactured using CMOS and laser trimming technologies.

The series provides large currents with a significantly small dropout voltage.

The XC6201 consists of a current limiter circuit, a driver transistor, a precision reference voltage and an error amplifier. Output voltage is selectable in 0.1V steps between 1.3V ~ 6.0V.

SOT-25, SOT-89 and USP-6B packages are available.

■ APPLICATIONS
- Smart phones / Mobile phones
- Portable game consoles
- Digital still cameras / Camcorders
- Digital audio equipment
- Reference voltage sources
- Multi-function power supplies

■ FEATURES
- Maximum Output Current : 250mA (TYP.)
- Dropout Voltage : 0.16V @ 100mA
- : 0.40V @ 200mA
- Maximum Operating Voltage : 10V
- Output Voltage Range : 1.3V ~ 6.0V (0.1V increments)
- Fixed Voltage Accuracy : ±1% (V_{OUT} (T) > 2.0V)
- ±2%
- Low Power Consumption : 2.0 μA (TYP.)
- Operating Ambient Temperature : -40°C ~ 85°C
- Packages : SOT-25,
- SOT-89
- USP-6B
- Environmentally Friendly : EU RoHS Compliant, Pb Free
- Tantalum or Ceramic Capacitor compatible

</tbody>
</table>

**NOTE:**

- *1: \( V_{OUT(T)} \) = Nominal output voltage.
- *2: \( V_{OUT(E)} \) = Effective output voltage (i.e. the output voltage when "\( V_{OUT(T)}+1.0V \)" is provided while maintaining a certain \( I_{OUT} \) value).
- *3: Vdif = (\( V_{IN1} - V_{OUT1} \))
  
  \( V_{IN1} \): An Input Voltage when \( V_{OUT1} \) appears as the input voltage is gradually decreased.
  
  \( V_{OUT1} \): A voltage equal to 98% of the output voltage when a stabilized \( (V_{OUT(T)}+1.0V) \) is input.
TEST CIRCUITS

Circuit ①: Supply Current

Circuit ②: Output Voltage, Oscillation, Line Regulation, Dropout Voltage, Load Regulation
With the XC6201 series regulator, in order to ensure the stabilized output voltage, we suggest that an output capacitor (C_L) of 1 μF or more be connected between the output pin (VOUT) and the VSS pin. For using low ESR capacitor (e.g. ceramic capacitors), please make sure that the output voltage is more than 1.7V. When the output voltage is from 1.3V to 1.6V, the output capacitor should be a tantalum capacitor with a capacitance of 2.2 μF. We also suggest an input capacitor (C_IN) should be connected between the V_IN and the V_SS in order to stabilize input power source.

<table>
<thead>
<tr>
<th>OUTPUT VOLTAGE</th>

<td>—</td>
</tr>
<tr>
<td>1.7V~6.0V</td>
<td>≥1.0 μF</td>
<td>≥1.0 μF</td>
<td>≥1.0 μF</td>
</tr>
</tbody>
</table>

Vin=1.8V~10V, Vout=1.7~6.0V
C_in=1.0μF(Ceramic), C_L=1.0μF(Tantalum)
1. Please use this IC within the stated absolute maximum ratings. The IC is liable to malfunction should the ratings be exceeded. When a voltage higher than the VIN flows to the VOUT like when using two power supplies, please connect a Schottky barrier diode between the VOUT and the VIN and do not exceed the VOUT rating.

2. An oscillation may occur by the impedance between a power supply and the input of the IC. Where the impedance is 10 Ω or more, please use an input capacitor (CIN) of at least 1 μF. In case of high output current, operation can be stabilized by increasing the input capacitor value. Also an oscillation may occur if the input capacitor value is smaller than the input impedance when the output capacitance (C_L) is large. In such cases, operations can be stabilized by either increasing the input capacitor value or reducing the output capacitor value.

3. Please ensure that output current (IOUT) is less than Pd / (VIN - VOUT) and do not exceed the rated power dissipation value (Pd) of the package.

**SOT-25 Power Dissipation**

Power dissipation data for the SOT-25 is shown in this page. The value of power dissipation varies with the mount board conditions. Please use this data as the reference data taken in the following condition.

1. **Measurement Condition**

   Condition: Mount on a board  
   Ambient: Natural convection  
   Soldering: Lead (Pb) free  
   Board: Dimensions 40 x 40 mm  
   (1600 mm² in one side)  
   Copper (Cu) traces occupy 50% of the board area in top and back faces  
   Package heat-sink is tied to the copper traces  
   (Board of SOT-26 is used.)  
   Material: Glass Epoxy (FR-4)  
   Thickness: 1.6 mm  
   Through-hole: 4 x 0.8 Diameter

2. **Power Dissipation vs. Ambient Temperature**

SOT-89 Power Dissipation

Power dissipation data for the SOT-89 is shown in this page. The value of power dissipation varies with the mount board conditions. Please use this data as the reference data taken in the following condition.

1. Measurement Condition

- Condition: Mount on a board
- Ambient: Natural convection
- Soldering: Lead (Pb) free
- Board: Dimensions 40 x 40 mm
  (1600 mm² in one side)
  Copper (Cu) traces occupy 50% of the board area in top and back faces
  Package heat-sink is tied to the copper traces
- Material: Glass Epoxy (FR-4)
- Thickness: 1.6mm
- Through-hole: 5 x 0.8 Diameter

</tbody>
</table>

⑥ represents assembly lot number

0 to 9, A to Z repeated (G, I, J, O, Q, W excluded)

Note: No character inversion used.
1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.

2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.

3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.

4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.

5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.

6. Our products are not designed to be Radiation-resistant.

7. Please use the product listed in this datasheet within the specified ranges.

8. We assume no responsibility for damage or loss due to abnormal use.

9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.
