## Positive Voltage Regulator with (Output ON/OFF)

## ■GENERAL DESCRIPTION

The XC 62 H series are highly precise, low power consumption, positive voltage regulators, manufactured using CMOS and laser trimming technologies. The series consists of a high precision voltage reference, an error correction circuit, and an output driver with current limitation.
By way of the CE function, with output turned off, the series enters standby. In the stand-by mode, power consumption is greatly reduced.

## APPLICATIONS

- Multi-function power supplies
- Voltage supplies for cellular phones
- Digital still cameras / Camcorders
- Note PC / Tablet PC

FEATURES
Maximum Output Current
: 165 mA (within max Pd, Vout=3.0V)
Output Voltage Range: 2.0V $\sim 6.0 \mathrm{~V}$ ( 0.1 V increments)
(1.5V $\sim 1.9 \mathrm{~V}$ semi-custom)

Highly Accurate
: $\pm 2 \%$
( $\pm 1 \%$ for semi-custom products)
Low Power Consumption
: $3 \mu \mathrm{~A}$ (TYP.) (Vout=3V,Output enabled)
: $0.1 \mu \mathrm{~A}$ (TYP.) (Output disabled)
Output Voltage Temperature Characteristics
$: \pm 100 \mathrm{ppm} /{ }^{\circ} \mathrm{C}$ (TYP.)
Line Regulation : $0.2 \% / \mathrm{V}$ (TYP.)
CMOS Low Power Consumption

| Dropout Voltage | $: 0.18 \mathrm{~V} @ 60 \mathrm{~mA}$ |
| :--- | :--- |
|  | $: 0.58 \mathrm{~V} @ 160 \mathrm{~mA}$ |
| Packages | $:$ SOT-25 |
|  | SOT-89-5 |
|  | USP-6B |

Environmentally Friendly :EU RoHS Compliant, Pb Free

## ■TYPICALAPPLICATION CIRCUIT

## -TYPICAL PERFORMANCE CHARACTERISTICS

XC62HR3002(3V)

## ■PIN CONFIGURATION

SOT-25 (TOP VIEW)

SOT-89-5
(TOP VIEW)

USP-6B (BOTTOM VIEW)
*The dissipation pad for the USP-6B package should be solder-plated in recommended mount pattern and metal masking so as to enhance mounting strength and heat release. If the pad needs to be connected to other pins, it should be connected to the VIN (No.1) pin.

## ■PIN ASSIGNMENT

| PIN NUMBER |  |  | PIN NAME | FUNCTIONS |
| :---: | :---: | :---: | :---: | :---: |
| SOT-25 | SOT-89-5 | USP-6B |  |  |
| 1 | 4 | 2,5 | NC | No Connection |
| 2 | 2 | 1 | VIN | Supply Voltage Input |
| 3 | 3 | 6 | CE | ON/OFF Chip Enable |
| 4 | 1 | 4 | Vss | Ground |
| 5 | 5 | 3 | Vout | Regulated Output Voltage |

■FUNCTIONS

| CE | OPERATION |

## ■TEST CIRCUITS

Circuit 1

Circuit 2

## ■OPERATIONAL EXPLANATION

Output voltage control with the XC62H series:
The voltage divided by resistors R1 \& R2 is compared with the internal reference voltage by the error amplifier. The P -channel MOSFET, which is connected to the Vout pin, is then driven by the subsequent output signal. The output voltage at the Vout pin is controlled \& stabilized by a system of negative feedback. The current limit circuit operate in relation to the level of output current.

< Current Limiter >
The XC62H series has output current limiter of fixed current limiter circuit. When the output current reaches the current limit, the fixed current limiter circuit operates and the output voltage drops with keeping the output current.

## <CE Pin>

The IC's internal circuitry can be operated or shutdown via the signal from the CE pin with the XC 62 H series. In shutdown mode, output at the Vout pin will be pulled down to the Vss level via R1 \& R2. Note that the XC62H series' regulator is "High Active/No Pull-Down", operations will become unstable with the CE pin open. We suggest that you use this IC with either a CE High level voltage or a CE Low level voltage input at the CE pin. If this IC is used with the correct specifications for the CE pin, the operational logic is fixed and the IC will operate normally. However, supply current may increase as a result of through current in the IC's internal circuitry.

## <Input and Output Capacitors>

The XC62H series needs an output capacitor ( $\mathrm{C}_{\mathrm{L}}$ ) for phase compensation. In order to ensure the stable phase compensation, please place an output capacitor of $1.0 \mu \mathrm{~F}$ at the $\mathrm{V}_{\text {out }}$ pin and $\mathrm{V}_{\mathrm{ss}}$ pin as close as possible. For a stable power input, please connect an input capacitor $\left(\mathrm{C}_{\mathrm{IN}}\right)$ of $1.0 \mu \mathrm{~F}$ between the input pin $\left(\mathrm{V}_{\mathrm{IN}}\right)$ and the ground pin ( $\mathrm{V}_{\mathrm{SS}}$ ).

## ■NOTES ON USE

1. Please use this IC within the stated maximum ratings. For temporary, transitional voltage drop or voltage rising phenomenon, the IC is liable to malfunction should the ratings be exceeded.
2. Where wiring impedance is high, operations may become unstable due to noise and/or phase lag depending on output current. Please strengthen $\mathrm{V}_{\mathrm{IN}}$ and $\mathrm{V}_{\text {ss }}$ wiring in particular.
3. Please wire the input capacitor $\left(\mathrm{C}_{\mathbb{N}}\right)$ and the output capacitor $\left(\mathrm{C}_{\llcorner }\right)$as close to the IC as possible.

Should rapid input fluctuation or load fluctuation occur, please increase the capacitor value such as CIN or CLto stabilize the operation.
4. Torex places an importance on improving our products and their reliability.

We request that users incorporate fail-safe designs and post-aging protection treatment when using Torex products in their systems.

| PACKAGE | OUTLINE / LAND PATTERN | THERMAL CHARACTERISTICS |
| :---: | :---: | :---: |
| SOT-25 | $\underline{\text { SOT-25 PKG }}$ | SOT-25 Power Dissipation |
| SOT-89-5 | $\underline{\text { SOT-89-5 PKG }}$ | $\underline{\text { SOT-89-5 Power Dissipation }}$ |
| USP-6B | $\underline{\text { USP-6B PKG }}$ | $\underline{\text { USP-6B Power Dissipation }}$ |

## MARKING RULE

-SOT-25, SOT-89-5

SOT-25
(TOP VIEW)

SOT-89-5 (TOP VIEW)
(2) represents decimal number of the output voltage

| MARK | VOLTAGE (V) |
| :---: | :---: |
| 0 | $(1) .0$ |
| 1 | $(1.1$ |
| 2 | $(1) 2$ |
| 3 | $(1) .3$ |
| 4 | $(1) .4$ |
| 5 | $(1) .5$ |
| 6 | $(1) .6$ |
| 7 | $(1) .7$ |
| 8 | $(1) 8$ |
| 9 | $(1) .9$ |

(1) represents integer of the output voltage

| MARK | VOLTAGE (V) |
| :---: | :---: |
| 0 | 0.2 |
| 1 | 1.2 |
| 2 | $2 .(2)$ |
| 3 | 3.2 |
| 4 | 4.2 |
| 5 | 5.2 |
| 6 | $6 .(2)$ |

(3) represents temperature characteristics
$\qquad$
(4) represents production lot number 0 to 9 , $A$ to $Z$ repeated, reverse character 0 to 9 , $A$ to $Z$ repeated (G, I, J, O, Q, W excluded)

## MARKING RULE

- USP-6B
(1) represents product series

| MARK | PRODUCT SERIES |
| :---: | :---: |
| H | XC62HR***** |

(2) represents CE pin logic

| MARK | LOGIC | PRODUCT SERIES |
| :---: | :---: | :---: |

| 3 | 3 | 3.3 | XC62HR330*D* |
| 5 | 0 | 5.0 | XC62HR500*D* |

(5) represents temperature characteristics

| MARK | TEMPERATURE <br> CHARACTERISTICS | PRODUCT SERIES |
| :---: | :---: | :---: |
| 0 | TYP $\pm 100 \mathrm{ppm}$ | $\mathrm{XC}^{2} 2 \mathrm{HR}^{* *} 0^{* * *}$ |

[^0]1. The product and product specifications contained herein are subject to change without notice to improve performance characteristics. Consult us, or our representatives before use, to confirm that the information in this datasheet is up to date.
2. The information in this datasheet is intended to illustrate the operation and characteristics of our products. We neither make warranties or representations with respect to the accuracy or completeness of the information contained in this datasheet nor grant any license to any intellectual property rights of ours or any third party concerning with the information in this datasheet.
3. Applicable export control laws and regulations should be complied and the procedures required by such laws and regulations should also be followed, when the product or any information contained in this datasheet is exported.
4. The product is neither intended nor warranted for use in equipment of systems which require extremely high levels of quality and/or reliability and/or a malfunction or failure which may cause loss of human life, bodily injury, serious property damage including but not limited to devices or equipment used in 1) nuclear facilities, 2) aerospace industry, 3) medical facilities, 4) automobile industry and other transportation industry and 5) safety devices and safety equipment to control combustions and explosions. Do not use the product for the above use unless agreed by us in writing in advance.
5. Although we make continuous efforts to improve the quality and reliability of our products; nevertheless Semiconductors are likely to fail with a certain probability. So in order to prevent personal injury and/or property damage resulting from such failure, customers are required to incorporate adequate safety measures in their designs, such as system fail safes, redundancy and fire prevention features.
6. Our products are not designed to be Radiation-resistant.
7. Please use the product listed in this datasheet within the specified ranges.
8. We assume no responsibility for damage or loss due to abnormal use.
9. All rights reserved. No part of this datasheet may be copied or reproduced unless agreed by Torex Semiconductor Ltd in writing in advance.

[^0]:    (6) represents production lot number

    0 to 9, A to $Z$ repeated (G, I, J, O, Q, W excluded)
    Note: No character inversion used.
